Hatfield Forest 2017 Veteran Tree Management Course

Hatfield Forest 31st January, 1st February, 2017 9am- 4pm

Do you work with veteran trees? This comprehensive two-day course is a must for anyone with veteran trees in their care - countryside managers, arborists and advisors.

The course will provide you with the necessary toolkit to effectively manage your veteran tree population. Hatfield Forest is the perfect case study due to its long term, consistent approach to pioneering 'environmental' arboriculture (Fay,2002). Using a mixture of classroom and outdoor sessions, Day One will provide the background knowledge surrounding the management of veteran trees, the ageing process, surveys, practical techniques for conservation and considerations when using contractors. During Day Two you will get to see demonstrations of work being done on some veteran trees. The final session will summarise the morning's work and also discuss how this type of arboriculture can be put into practice at your own site.

Course Costs: £260 excl. VAT
